The proteins can be used for inhibiting cellular proliferation, when coadministering with a p54 protein. The RISPs can be used for treating dispasses characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of

```
This sequence encodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p54 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              977 GAGTAATGGAATGCATGCTIAAATGAGAAGAAGGATTAFCCATTGAAAATTTAGGA 1036

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein (RTSP) of the invention. The proteins can be used for inhibiting callular proliferation, when coadministered with a p55 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tetracycline responsive expression vector (TREV), which contains a sequence encoding a fusion protein comprising a transcriptional transactivation domain (TED) operatively attached to a tetracycline repressor protein (TRE), the first sequence operatively positioned downstream of a promotor. The vector also contains a cloning site operatively positioned downstream of a based promoter comprising a tetracycline operator. The TREVs can be used to produce stable cell lines in which gene expression is tightly regulated by tetracycline.

sital componentia which hyposses khool/or p53. Antisense constructs of the kbool p161NK4a genes may also be used. The methods are useful for increasing the proliferative capacity of cells. The cells are subsequently of use in pharmaceutical and cosmetic preparations used to treat conditions related to (premature) agains, e.g. macutar degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MESTL, telomerase, catalytic subunity reverse transcriptase, life span, retinoblastoma; p53; tumour suppressor; inhibitor; arterioscierosis; profiferation, immortal; tumour therapy; macular degeneration; activator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  action the number of miletic discussions, of a cell. The method relies on action of a followerse series; of a cell. The method relies on action of a followerse series; yet a p53 pathway Phosphorylation of Rb by eyelin-dependent Kinases, edg and edgk, releases the relis into the division cycle. Hinding of INVA family members, e.g. the tumour suppressor p161NK4a, inhibits kinase activity and results in growth arrest. Rb Enactuations can selectively and results in growth division of Rb Enactuation and receivably inactivate an Rk CBF4 piber. Rb Enactuation of Rb-PiffINK4a pulbway. The energiate an analysis a cellular inhibitor of Rb-PifFINK4 pulbway. The energiate in RBC is a cellular inhibitor of Rb-PifFINK4 pulbway. The energiate in the methods other molecules which can be used in the methods. Other molecules which can be used in the case and mass are easier and resistant is one which dillers from a new more easier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention concerns methods and reagents for extending the life-span,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New method for increasing the proliferative capacity of cell lines comprises administering agents reversibly activating telemerase activity and reversibly inactivating Rb/INK4 and/or p53 pathways useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and arteriosolerosis. The rells can also be used to replace tumour cell

ALIGNMENTS

PESULT 1 AAV58449 AAV56449 standard; DNA; 3161 BP

AAV58449;

(lirst entry) 02-DEC-1998 Modified retinoblastoma tumour suppressor gene.

Modified retinoblastoma tumour suppressor; KTSP protein; cancer therapy; cellular proliferation inhibitor, ss.

Homo sapiens

Location/Qualifiers 7..2400 /*tag-

```
protein (RTSP) of the invention. The proteins can be used for inhibiting calculated proliferation, when coadministered with a ps3 protein. The BTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8] ValSerSerValAspClyValLeuGlyGlyTyrIleGlnLysLysLysGluLeuTrpGly 100

This sequence encodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p54 protein. The KTSPs can be used for treating diseases characterised by almormal cellular proliferation, particularly cancers. The KTSPs have a broader spectrum of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          011
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        81 ValSerSerValAspGlyValLeuGlyGlyTyrIleClnLysLysLysGlsLeuTrpQly 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The segrects is that of the retinoblastoms give which encodes the retinoblastoms (RH) protein which may be used as part of a method of controlling used cycle progression which may be used in combination with therapeutic methods to arrest tumouriquenesis in organisms. The manner The protein is used in a compan, is relatively inexpensive and readily obtainable, and shows little or no toxic effects on healthy cells, it is also compatible with other methods and devices
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regulating certain physiological processes of the body, such as

This mucleotide sequence includes a coding region for relinoblastoma profer B & Gee ANWEASS). A new elabrael playpeptide to a tusion of: (i) a transcription factor (FF) comprising a DNA binding domain, and (ii) a retinoblastoma (FE) polypeptide that includes a growth suppression domain. Also new are: (i) a nucleic and encoding the lusion profein, and (2) expression vectors containing such DNA. The fusion protein, particularly expressed from gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                439 ATOTGTATOTTTATTGCAGCAGTTGAGGTAGAGA IGTGGT FGAGTTTTAGTGAGGTA 498

Sequence 2994 BP; 974 A; 618 C; 594 G; 808 T; 0 other;

```
This sequence represents the wild type human retinoblastoma gene. The invention relates to a method of detecting a mutated retinoblastoma (with northic acid in mammals comprising hybridizing an isolated for itemath, wild type NB (with) TONA probe to a cell sample and detecting a mutated NB nucleic acid. The method is useful as a diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PR denot human; retinoblastoma denot mutation detection; immunoscreening; retinoblastoma diagnosis; hereditary retinoblastoma; secondary cancer; osteosarcoma; fibrosarcoma; glioblastoma; breast cancer;

RB cDNA or genomic DNA are preferably used as probes to determine the defect region of the mRR gene through genomic DNA blotting analysis or using the method of restriction fragment length polymorphism analysis to determine the diseased allele. Cloned RB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cancer, such as, ostcosarcoma, fibrosarcoma, gliobiastoma, breast cancer, whether or now connected with residualisations. The method is plan used in the suppression of tumouniqueesis where the absent RB protein ppRRIIO will be provided through the molecular induction and genericansplanting of the RB cDNA to the individual in need of ppRBIIO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  namilies with a history of boraditary relinchlasters and for acrossing their children. It may also be used in prophylactic and postnatal screening and for the prediction of the development of serondary

adenovirus expression vector, where the vector has an insert of excaemous DNA comprising a gene encoding a foreign protein and adenovirus DNA in which all of the coding sequences of Ela, Elb, and protein IX, and part of SI are deleted, the vectors are useful in gene therapy treatment of cancer, especially for treating p53 deficient tuments. The excitences suffer and since efficient gene therapy of cancer. The present sequence encodes human p10-RB retinoblastoms tument suppressor which can be used as the foreign gene therapy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a composition comprising a recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           *: ValSerSerValAspAlyVallendilyriY(YrII)ettletlnLysLysCLysCLyrstIrptly 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            THEFTER THE THEFTER THE STATE OF THE OF THE STATE OF THE

The present cDNA sequence encodes retinoblastoma (RB) tumour suppressor protein, desidanted as p10RB.

Protein, desidanted as p10RB.

Characterised by the partial or total deletion of the adenovial protein IX DNA beginning at nucleotides (57 or 360 and ending at 1920 4050, and having a gene encoding a foreign protein such as tumour suppressor protein, F10RB (Feticoblaska) and F3 Adenovias we for is used for screening tumour suppressor quees useful in gene therapy. The vertor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             is particularly useful for treating or reducing hyperprolificative cell disorders such as thyroid hyperplasia, Grave's disease, psoriasis, benique prostatic hypertrophy. In Fraumeni syndrome, cancers specifically hepatocellular carcinoma, neoplasms, leukaemias, lymphomas, etc. to inhibit tumour prolifieration or to anteliorate particular related pathology such as sickle cell anaemia and Tay-Sachs disease. The vector
                                                                                                                                                                                                                                                                                                                                         New recombinant adenovirus expression vector having a gene encoding for a foreign protein and a partial or total deletion of the adenoviral protein IX DNA, useful in gene therapy for freating or reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is also useful for the safe recombinant production of diagnostic and therapeutic polypeptides and proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 Met ProProLysThrProArqLysThrAlaAlaThrAlaAlaAlaAlaAlaGluPro 20
